

PhytoCare®

POULTRY CONCENTRATE

PhytoCare® Poultry Concentrate

Natural Digestive Health Solution for Poultry.

Supports hydration and normal digestive function in newly hatched chicks and poults in the first few days of life - giving them the extra edge they need. This is especially important in Antibiotic Free Environments.

Mix concentrate with non-chlorinated water for making infused stock solution. Administer at 1:128 using waterline medicator.

FIELD USES

Chick Starter: (Day 2-4)

Essential for assisting in cellular health as well as maximizing the development of beneficial microbiome intestinal flora.

Transitional stress: (Day 14-21)

Essential to assist in cellular stresses during key growth periods.

Growing intestinal Stress periods: Birds can often go thru periods of production stresses that are intestinal track related.

Storage Temps: 40F – 80F: Do not allow to freeze

Brookings, SD USA

PhytoCare® Poultry Concentrate is formulated for use in starting chicks with a healthy functional digestive microbiome.

The product is also used in the transition state from day 14-16 when the birds nutritional intake is being maximized and digestive stress is high.

Use product whenever intestinal stress is seen during the growing phase of production.

Multi-Plant extract concentration.
